

785 nm Dual Wavelength Narrow Linewidth Laser System of NLDM Series

DESCRIPTION

The special dual wavelength narrow linewidth laser system of our company in the top view can provide two kinds of wavelength narrow linewidth fiber coupling output. The laser adopts the core technologies such as wavelength locking of body Bragg grating (VBG), directional optical feedback and built-in semiconductor refrigeration module to realize the narrow linewidth, stable power and stable spectral output of the system.

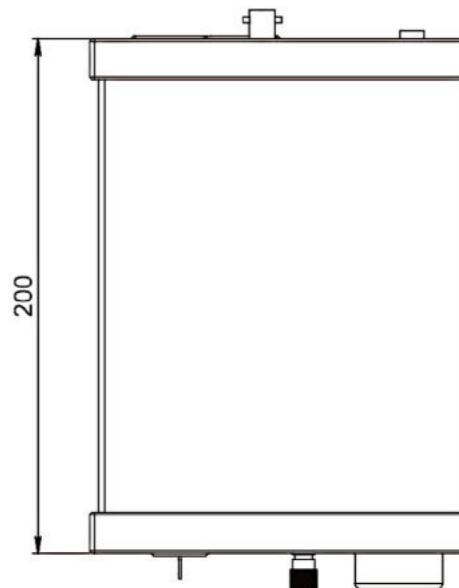

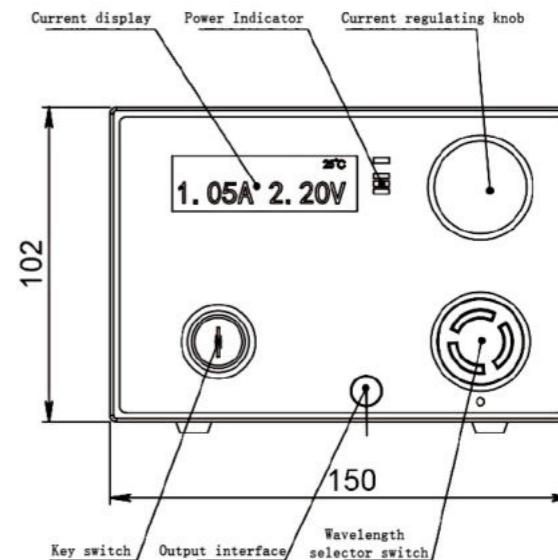

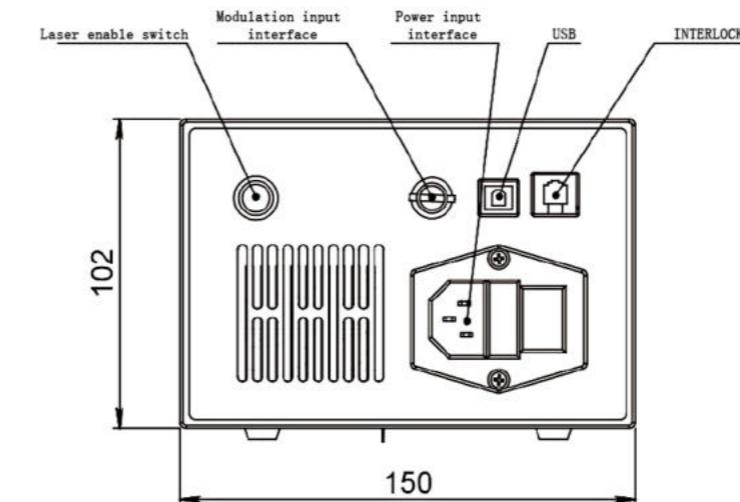

FEATURES

- Both wavelengths can achieve line width <0.1nm
- Frequency stability better than $\pm 0.005\text{nm}@8\text{H}$
- Constant two-wavelength frequency interval, supporting differential calculation methods
- Temperature drift <0.007nm / °C, VBG wave lock
- Built-in TEC, power stability is better than $\pm 1.5\%$
- Including host computer control, emergency stop switch, short circuit protection and other functions

APPLICATIONS

- Confocal microscopy
- Raman spectroscopy
- Super-resolution microscopy
- Biological detection
